Re: Application No. 09/772,176; Attorney Docket TAN-2-1508.01.US
Discussion Points for January 15, 2009 Phone Conference.

1. Explaining how cited art maps to current claim language when the first cited art describes a method for determining range and bearing of two aircraft for a potential rendezvous, and the second cited art discloses a method for permitting data rates to adapt to specific channel conditions, while the claims of the instant application refer to measurements that determine the rapid change (motion) of computing devices or external object motion and the corresponding adjustments made to maintain a high signal to noise ratio.
2. Potential amendments that will move the application forward – while not requiring an additional search (no RCE).
3. Alternatively, amendments that will move the application forward but may require an RCE.
